EMISSIONS REDUCTIONS PLAN

CITY OF HOUSTON

INTEROFFICE CORRESPONDENCE

To: City Council Members

From: Lee P. Brown

Mayor

Date:

July 28, 2000

Subject:

Emission Reductions Plan

I am pleased to provide the City of Houston Emissions Reduction Plan for your information and review. Reducing air pollution in order to assure cleaner air for our citizens to breathe is the number one public policy challenge faced by the Houston-Galveston Region. The effects of our air quality problems on our constituents' health and well being, on our governments and infrastructure, on our businesses, and on our region cannot be underestimated.

I am committed to providing leadership on this issue and to show that the Clean Air challenge can be met. In January, 2000, I created the Mayor's Clean Air Team through Executive Order 1-45. The Mayor's Clean Air team was charged with establishing a comprehensive emissions inventory of the City's internal activities and associated contractors. It was also charged with developing emission reductions targets for City operations and contracts consistent with the State Implementation Plan requirements for the Houston-Galveston Ozone Non-attainment Region. The Clean Air Team had further responsibilities of identifying City emissions reductions controls, establishing timelines and sequences of these controls to achieve the specified emission reduction targets, and determining cost estimates of the controls. All of these elements are included in the City of Houston Emissions Reductions Plan. While the cumulative costs to the City of Houston to meet the emission reductions targets are significant and the required actions are not all easy to accomplish, the costs of not meeting the emission reductions goals are much more significant and costly to ourselves, our neighborhoods, our communities, and our region.

The Plan is structured as a "how to" case study to allow other regional stakeholders to follow the steps used by the City Clean Air Team. Using the Plan as a guideline, they can identify and address their own emissions sources to achieve comparable emissions reductions from their own activities.

I want to applaud the collaborative efforts of the Clean Air Team, the department directors and their clean air liaisons in developing the City of Houston Emissions Reductions Plan. They have met and exceeded their charge, in a most timely manner. Now we must proceed to implement the plan elements and controls to achieve the required emission reductions and clean our air.

R O C E S

BUILDING THE PLAN

The City of Houston, as part of the Houston-Galveston Ozone Non-attainment Region, must comply with the current federal standards for ground-level ozone by 2007.

The city and the region are faced with potential loss of federal transportation funds, increased health costs, and other consequences if the compliance mandates are not met. The impact of non-compliance for the city and the region is estimated to be as high as 4 billion dollars per year.

That is why the City of Houston, under the direction of Mayor Lee P. Brown, is committed to providing leadership on this issue and to ensure that the Clean Air Challenge can be met.

JANUARY 2000

Mayor Lee P. Brown enacted Executive Order 1-45. This Executive Order called for the establishment of a comprehensive air pollution emissions reductions plan for each department of the City. It also established procedures for City departments; ensures timelines for compliance with these procedures; educates City of Houston employees on the sources of air pollution emissions; authorizes an audit of air pollution emissions from City activities; and develops an Air Plan to reduce the air pollution emissions associated with City activities.

APRIL 2000

The Mayor's Clean Air Team completes the air pollution emissions audit.

JUNE 2000

The Mayor's Clean Air Team developed an Air Quality Plan to reduce the air pollution emissions resulting from, and associated with, City activities.

July 2000

Implementation of the City of Houston's Emissions Reductions Plan begins.

The success of this plan is based on a continuing team effort that created this plan in a very short time frame. It also meets the intent and spirit of Executive Order 1-45.

8 STEP EMISSIONS REDUCTIONS PROCESS

Executive Order 1-45 lead to the creation of the Mayor's Clean Air Team. The team consisted of Air Quality Liaisons from each city department as well as other department and private sector stakeholders. The team collectively used an 8-step process, which resulted in the creation of the City of Houston's Emissions Reductions Plan and subsequent supporting guidelines.

| STEP 1 | Identify sources and quantify amounts of emissions |
|--------|---|
| STEP 2 | Define the emissions reductions target goal |
| STEP 3 | Document and quantify previous emissions reductions |
| STEP 4 | Identify citywide emissions reductions controls and establish timelines for their implementation |
| STEP 5 | Identify needed departmental emissions reductions controls and establish a timeline for implementation |
| STEP 6 | Adopt citywide and departmental emissions reductions controls sufficient to meet the target goal |
| STEP 7 | Implement the adopted emissions reductions controls |
| STEP 8 | Monitor the actual emissions reductions versus the estimated emissions reductions and make adjustments to ensure achievement of target goal |

(Steps in blue are part of the actual plan)

THE PLAN

The City of Houston's Emissions Reductions Plan started with an emissions inventory of city sources. The scope of the inventory provided an initial summary inventory of multiple pollutants, while focusing on nitrogen oxides (NOx) emissions. The basis of the inventory was two-tiered. The first tier was based on known information from standard city databases for vehicles and equipment. The second tier of the inventory process identified stationary sources of emissions such as boilers and generators. The usage information and accuracy of the data was validated by the department clean air liaisons.

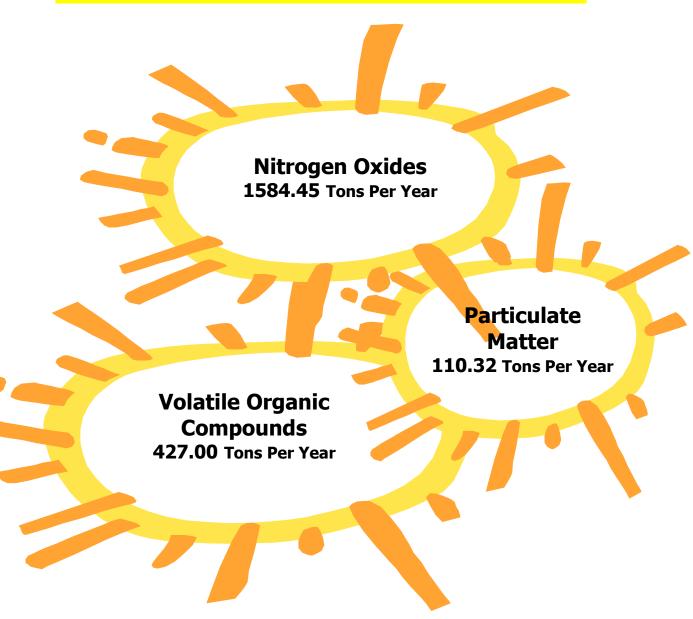

Once the inventories were completed, the information was combined and aggregated through consultant expertise. This process created a comprehensive citywide emissions inventory using EPA approved emission factors consistent with the required State Implementation Plan (SIP) modeling data.

Based on the SIP requirements and the final emissions inventory, a reductions target goal of 75% of current emissions was set. By identifying the sources and magnitude of NOx emissions, the type of emissions reductions controls needed to achieve the targets were determined, analyzed and evaluated.

Identifying previous emissions reductions was the first step towards achieving the goal. This was accomplished by accounting for proactive actions which the City of Houston as taken since 1993. The reduction of NOx emissions for this period was 102.3 tons per year.

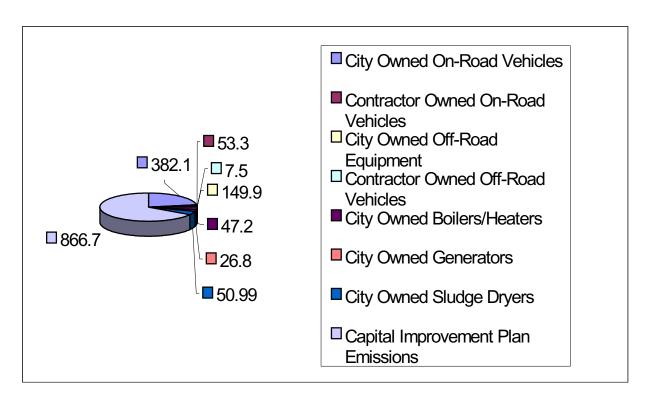

After determining what emissions reductions had already been achieved, the next steps involved identifying both citywide and generic departmental emissions control options and determining the costs and impacts.

R **O L** S

THE CONTROLS

In order to achieve optimal success and reach the target of 75% NOx emissions reductions, a set of eight citywide (seven operational and one construction) and five departmental controls were designed and evaluated.

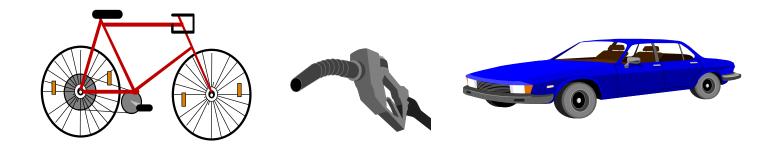

Cost/benefit analyses of the respective controls were completed and the controls were then ranked in order from most cost effective to least cost effective. Based on this ranking, it was required to use all eight citywide controls and three of the five departmental controls to reach the target.

The plan consists primarily of the following controls:

- 1. Continue existing policy of requiring new purchases of clean vehicles and equipment
- 2. Purchase very low sulfur gasoline and diesel fuel starting in Fiscal Year 2002
- 3. Conduct field demonstrations of diesel catalysts in Fiscal Year 2001 and retrofit the city's diesel fleet with the successful catalysts, starting in Fiscal Year 2002
- 4. Retrofit the city's stationary emission sources (i.e. boilers, generators) starting in Fiscal Year 2002
- 5. Expand Employee Commute Options (bus passes and van/car pools) citywide starting in Fiscal Year 2002
- 6. Require city contractors to meet the same emission reductions requirements as city operations with the major costs starting in Fiscal Year 2003

At the heart of the plan's controls is the Diesel Field Demonstration Project. The city was awarded grants in the amount of \$671,057.00 in April 2000 for this project. It is important to note that if the field demonstration does not validate a retrofit emission control system capable of achieving 75% NOx reductions, the entire city plan will need to be reassessed and revised. The project will consist of field demonstrations using diesel catalysts on various vehicles and equipment from the summer of 2000 through the spring of 2001. The successful outcome of these demonstrations will allow the city to retrofit that part of its 2700 item inventory of on-road and off-road diesel equipment for which new clean replacements are not purchased. The results of the project will also assist city contractors in meeting the city's contractual requirements for clean vehicles and equipment on all city contracts starting in July 2002.

PREVIOUS ACTIONS FOR NOx EMISSIONS REDUCTIONS (Starting 1993)

| ACTION | DESCRIPTION | NOx EMISSIONS REDUCTIONS (Tons Per Year) |
|----------|---|--|
| 0 | EXPANDED CITY EMPLOYEE METRO BUS PASS PROGRAM = INCREASED RIDERSHIP BY 1019 EMPLOYEES | 25.5 |
| 2 | PURCHASE OF LOW EMISSION VEHICLES = 452 GASOLINE LEVS AND 124 CNG | 18.4 |

| | | | |

EMISSIONS REDUCTIONS TARGET EXCEEDED

All controls subject to substitution with less-costly controls if funds for additional emissions reductions are committed

²Citywide Clean Equipment and Vehicles costs based on trend from FY01 budget; additional new vehicle purchases less costly than diesel retrofit controls 1\$3500 per ton recommended only if other controls are unsuccessful

4\$65,000 per ton; not recommended except for selected instances 3 Capital (construction) controls, listed in cost benefit rank order

THE CHALLENGE IS MET

CITY OF HOUSTON

EXECUTIVE ORDER

SUBJECT:

PROCEDURE REGARDING AIR EMISSIONS
IN CITY DEPARTMENTS

E. O. No.

1-45

Effective Date
Upon Approval

1.0 AUTHORITY

The Mayor has the authority to execute this Executive Order under City of Houston Charter Article VI § 7a which gives the Mayor control over "all the administrative work of the city government". This Executive Order is also a response to the Texas Health and Safety Code § 381.002 which states that the purpose of the Texas Clean Air Act is "to safeguard the state's air resources from pollution by controlling or abating air pollution and emissions of air contaminants, consistent with the protection of public health, general welfare, and physical property, including the aesthetic enjoyment of air resources by the public and the maintenance of adequate visibility."

2.0 PURPOSE

To establish a comprehensive air pollution emissions reduction plan for each department of the City. An audit will be performed by each department and the results will be used to develop a plan to reduce air pollution emissions from the department's activities. Each department will designate at least one Air Quality Liaison who is responsible for performing an air emission audit of their department and implementing the Air Plan.

3.0 OBJECTIVES

To establish procedures for City departments, ensure compliance with these procedures, educate City of Houston employees on the sources of air pollution emissions, perform an audit of air pollution emissions resulting from City activities by April of 2000, develop an Air Plan to reduce the air pollution emissions resulting from and associated with City activities by May 2000 and begin implementation of the Air Plan by July 2000.

4.0 SCOPE

The Executive Order applies to all City departments and the Mayor's office and is promulgated for the purposes of investigation, planning and reporting. The activities required under this Executive Order will not require additional funding.

Approved Date Approved 1-25-00 Page 1 of 4

5.0 DEFINITIONS

- 5.1 "Air Emissions Audit" is an investigation of the source, quantity and duration of the emission of air pollutants. The audit shall primarily focus on NO_x and include VOC and fine particulate matter. The result of the Air Emissions Audit will be an air pollution emissions inventory.
- 5.2 "Air Plan" is the plan generated by each department to implement procedures and/or actions to reduce air pollution emissions for the purposes of complying with state and federal requirements. The Air Plan shall provide the source and amount of air pollution emissions and action plan for each emission source. The Air Plan shall include, but is not limited to, the reduction of air pollution emissions from the operation of motor-driven vehicles, the operation of motor-driven equipment, the use of electricity, the release of particulate matter to the ambient air, and vehicle miles travelled by employees. The Air Plan shall include a consideration and discussion of the purchasing of replacement energy efficient equipment and materials, the purchasing of replacement energy efficient lighting, the purchasing of replacement non-aerosol items as opposed to aerosol items, and increasing employee telecommunication in lieu of travel.
- 5.3 "Air Pollution Emissions" for the purposes of this Executive Order shall refer to emissions of VOC, NO_x and fine particulate matter.
- 5.4 "Air Pollution Emissions Inventory" shall include all the items required by the Director of Environmental Policy and in particular shall include air pollution emission sources found in the operation of City of Houston buildings, air pollution emission sources from motorized equipment and/or vehicles owned or operated by the City of Houston, air emission sources from motorized equipment and/or vehicles owned or operated by City of Houston employees in the performance of their job duties, and any other air pollution emissions sources from City of Houston activities.
- 5.5 "Air Quality Liaison" is an employee of the City of Houston who has been designated by his/her department head as the (one of the) representative(s) of the department who will attend HAXL training on air pollution emission inventory generation, oversee the collection of data and prepare an inventory of air pollution emissions for the department. The Air Quality Liaison will also oversee implementation of the Air Plan.
- 5.6 "Director of Environmental Policy" is a city employee previously appointed by the Mayor entrusted with the responsibility of developing city policy on environmental issues. The Director of Environmental Policy reports to the Mayor through the Chief Administrative Officer.
- 5.7 "Fine Particulate Matter" is the airborne particulate matter with diameter less than $2.5\mu m$.

- "HAXL" is a committee on Air Policy previously appointed by the Mayor and entrusted with the responsibility to develop policy for responding to federal and state requirements under the federal Clean Air Act of 1990. The HAXL committee reports to the Mayor through the Chief Administrative Officer. HAXL is an acronym for Houston Air eXcellence and Leadership.
- 5.9 " No_x " is the abbreviation for nitrous oxides, a precursor pollutant for ozone.
- 5.10 "VOC" is the abbreviation for volatile organic compounds, a precursor pollutant for ozone.

6.0 RESPONSIBILITIES

- All City Department Heads are charged with the responsibility of performing an Air Emission Audit and preparing and implementing a plan to reduce air pollution emissions ("Air Plan"). Each Department Head shall designate at least one Air Quality Liaison who has the authority to perform the duties outlined below. Each Department Head shall ensure that the Air Quality Liaison(s) attend all training sessions provided by HAXL. Each Department Head shall deliver no later than March 29, 2000 to the Director of Environmental Policy a final inventory of air emissions in the format required by HAXL. Each Department Head shall deliver no later than May 31, 2000 the departmental Air Plan to the Director of Environmental Policy. Each Department Head shall implement the Air Plan as finally approved by the Mayor and in the manner required by the Mayor-approved Air Plan. Each Department Head shall report the progress of implementing the Air Plan to the Director of Environmental Policy every three (3) months after the initial implementation of the Air Plan.
- 6.2 All Air Quality Liaisons shall participate in all training to be coordinated by the Director of Environmental Policy. Each Air Quality Liaison shall perform an air pollution emissions audit of his/her department as directed in the training provided by the Director of Environmental Policy. Each Air Quality Liaison shall prepare an inventory of the air pollution emissions in his/her department to be delivered by the Department Head to the Director of Environmental Policy no later than March 29, 2000. Each Air Quality Liaison shall prepare an Air Plan for his/her department to be delivered by the Department Head to the Director of Environmental Policy no later than May 31, 2000. For each department that has more than one Air Quality Liaison, the liaisons shall work together and produce only one inventory and one Air Plan for the department. The Air Quality Liaison is a position that will not require additional funding to accomplish the responsibilities set out above.
- 6.3 The Director of Environmental Policy has been designated by the Mayor, prior to this Executive Order. He/she shall be responsible for overseeing the training of the Air Quality Liaisons for the performance of their audits. The Director of Environmental Policy will be available for assistance to the Department Heads and Air Quality Liaisons. The Director of Environmental Policy will also review each department's Air Plan, recommend modifications as needed, and recommend approval of the acceptable Air Plans to the Mayor as appropriate, and support implementation of the Air Plans. The Director of Environmental Policy shall submit the results of implementation of all of the Air Plans every three months to the Mayor. No additional funding is necessary to complete the responsibilities delineated in this Executive Order.
